# MSC Licenses Distene Hex, Hybrid Meshing Components

MSC Software Corp. announces the expansion of its OEM license & distribution agreement with Distene to include MeshGems' hexahedral and hybrid meshing components. These technologies join the other MeshGems surface and volume meshing components that are already incorporated inside MSC products.

One of the first products planned to leverage the new meshing components is MSC's Actran, the acoustic simulation software; addressing the need for a robust hexahedral dominant automatic finite element mesh generator.

Following the use of Distene's hex and hybrid meshing components in Actran, MSC anticipates using the technology in additional products throughout its portfolio.
